

INSIGHTS AND CONSIDERATIONS IN MODERN BUSINESS ENGLISH INSTRUCTION

Carina BRÂNZILĂ

Alexandru Ioan Cuza University, Iași, Romania

Abstract: The paper aims to explore contemporary trends and challenges in Business English teaching at tertiary level. In an increasingly globalized market, Business English educators must adapt to evolving professional communication needs. The present research investigates current pedagogical approaches worldwide, including the integration of digital tools, authentic materials, and intercultural competence development. It will consider the shift from traditional language acquisition to communicative competence, emphasizing real-world application. It will also offer practical insights and theoretical considerations for enhancing the effectiveness of modern Business English instruction.

Keywords: Tertiary education, Business English, modern approaches, globalization

1. Introduction

The area of Business English in tertiary education has undergone important transformations in recent decades, a shift brought by the changes of globalization, the unavoidable influence of technological advancements, and the ever-evolving demands of the professional sphere. A very recent survey by Global Business Insights (2024) revealed that 85% of multinational corporations identify strong English communication skills as a critical skill they take into consideration when hiring international employees, a fact that indicates the high value placed on this competency. As businesses increasingly go beyond geographical boundaries and moves towards complex digital ecosystems, the imperative for effective communication in English, the still global *lingua franca*, has become more pronounced than perhaps ever before. University students found at the beginning of their professional journey in business need not just linguistic proficiency but also the ability to deal with the complexities of intercultural interactions and diverse professional environments. This article looks into some of the contemporary trends shaping the teaching of Business English to students in tertiary institutions, with a specific focus on the modern learner-centered approaches, integration of technology, cultivation of intercultural competence, and the strategic use of authentic, real-world teaching materials. By examining these important trends, the article aims to offer educators some helpful insights for designing dynamic curricula that aligned with the complex needs of today's interconnected global workforce. Furthermore, this article will explore the underlying reasons for these pedagogical changes and briefly consider their development in different educational contexts.

2. Learner-centered approach

One of the most prominent trends in teaching Business English is the shift toward learner-centered pedagogy which in the last decades slowly became the norm.

Traditional teacher-led instruction, which often meant grammar drills and vocabulary memorization, has given way to more modern approaches that prioritize students' needs, goals, and interests. The learner-centered approach is perhaps the most popular. Teachers trained in CELTA and TRINITY Tesol courses slowly brought this teaching approach worldwide. One of its most important features is that it recognizes the diversity of students, their diverse backgrounds and motivations to learn. Some students may wish to get hired in multinational corporations, while others may want to start their own business or perhaps have already attempted to build a start-up or had valuable experiences with internships.

By adapting the teaching content to these different needs, instructors will bring about greater student engagement. For instance, needs analysis surveys conducted at the start of a course allow teachers to identify students' career goals and customize lessons accordingly. Such needs analysis surveys are critical in private language schools where paying students expect quick results adapted to their needs and it is something that public education institutions should probably learn to use, as well. The outcome of such needs analysis might involve focusing the act of teaching on very specific skills, such as writing professional emails, delivering presentations, or negotiating contracts. Moreover, learner-centered approaches encourage active participation through collaborative tasks like case studies and role-plays, which simulate real-world business scenarios. These activities not only enhance language skills but also build critical thinking and problem-solving abilities, which are essential in future professional settings. Thus, learner-centered approaches prioritize the individual needs, specific goals, and specific interests of students. Beyond enhanced engagement, learner-centered methodologies increase student autonomy, raise motivation, and encourage a better understanding of the subject (Rogers, 2010).

Obviously, educators may feel challenged in the implementation of this learner-centered approach. Some challenges might be time constraints within the curriculum, managing the diverse needs of large class and teaching students of various levels. However, strategies such as differentiated instruction and the careful design of flexible learning activities can help with these obstacles (Brown, 2015). There are numerous learner-centered activities, beyond case studies and role-plays: project-based learning, where students work in teams on real-world business challenges, and student-led presentations where learners explore by themselves business topics according with their interests, studying specific success stories and bringing them to class, analyzing documentaries, books or articles and discussing them in class and many more.

3. Modern teaching approaches

The use of authentic, real-life teaching materials is an important approach in modern Business English teaching. Unlike generic language textbooks, authentic materials like annual reports, marketing campaigns, or industry blogs expose students to the language and conventions of actual business contexts. These resources make learning relevant and engaging, as students see direct connections between classroom activities and their future careers. For instance, analyzing a company's social media strategy can teach students about tone, audience awareness, and persuasive language, while reviewing a financial report introduces specialized vocabulary and formal writing rules. Authentic materials also reflect the dynamic nature of business communication, which increasingly incorporates informal and digital formats, such as social media messages or LinkedIn

posts. However, instructors must use these materials gradually, careful not to burden learners with too difficult materials from the beginning. Pre-teaching key vocabulary is essential, just like providing glossaries, or breaking tasks into manageable steps ensuring that students can engage with authentic content effectively and at their own pace, as well. By using real-world texts in their class, teachers will help students develop the practical skills needed to communicate efficiently in a future professional context.

Task-based learning has also gained positive feedback as a modern method for teaching Business English. This approach involves designing activities around specific tasks that mirror workplace demands, such as drafting a business proposal, conducting a market analysis, or participating in a mock job interview. Task-based learning aligns with the principles of communicative language teaching, which prioritize meaning over form. Students focus on achieving a goal, like persuading a client or resolving a conflict at work, while using language as a tool to accomplish it. This process encourages fluency and strategic competence, as students learn to adapt their language to different contexts and audiences. In other words, students improve their language skills without realising they are learning. Furthermore, task-based learning encourages collaboration, as many tasks require teamwork, and this mirrors the collaboration present nowadays in most workplaces. For example, a group project to design a marketing campaign might involve brainstorming, delegating roles, presenting ideas, mock-meetings etc.; all such class activities develop linguistic and professional skills, alike. Instructors play the role of a facilitator, more than that of the class master, simply guiding students through the activities: the planning, execution, and reflection cycles, while offering the required feedback on language use and content. This approach bridges the gap between classroom learning and real-world application, offering students the necessary confidence to handle complex business scenarios in real life.

Blended learning, which combines face-to-face and online instruction, is another trend shaping Business English education nowadays, gaining popularity after the COVID pandemic, as well. This teaching approach offers flexibility, catering to the busy schedules of college students who often have to deal with studies, internships, and part-time jobs. In a blended learning environment, in-person classes might focus on interactive activities like debates or role-plays, while online components might include self-paced exercises, discussion forums, or video lectures. This hybrid approach allows students to have more control over their learning process, as they can look again through teaching materials or ask for clarifications via digital platforms. Blended learning also supports differentiated instruction, enabling teachers to address diverse proficiency levels within the same class. For instance, advanced students might work on challenging case studies online, while beginners can do more basic grammar exercises. However, successful blended learning requires careful planning to ensure coherence between online and offline components - not an easy task. Teachers must also encourage a sense of community, as the online environment can sometimes feel arid. Again, the COVID pandemic showed how isolating online learning may become after some time. By balancing structure and interaction, blended learning can be a dynamic and inclusive learning experience that students benefit from.

Another important trend today is the incorporation of soft skills training within Business English courses. This, again, reflects the evolving expectations of employers and the demands of today's workplace. Apart from language proficiency, businesses nowadays value skills like leadership, emotional intelligence, and adaptability. Students should learn to integrate these competencies into their communication activities. For

example, a lesson on giving feedback might teach students not only how to structure helpful comments but also how to deliver them with empathy and clarity. Similarly, activities focused on teamwork can highlight the importance of active listening and conflict resolution. By embedding soft skills in language instruction, teachers holistically address the needs of their students as future professionals. Role-plays and simulations are particularly effective for this purpose, as they allow students to exercise both linguistic and interpersonal skills in context. For example, a negotiation role-play will require students to balance assertiveness with diplomacy, reinforcing the interplay between language and behavior. This trend highlights the interdisciplinary nature of Business English, which thus incorporates insights from communication, psychology, and organizational behaviour studies.

Assessment in Business English has also changed in order to align with these new teaching approaches. Traditional exams, which often tested discrete language skills, are increasingly replaced with performance-based assessments that evaluate students' ability to apply language in realistic contexts. Preparing a learning portfolio, for example, allows students to compile a range of work like emails, reports, and even recorded presentations, demonstrating their progress over the course. Peer and self-assessment encourage reflective practice, helping students identify their strengths and areas for improvement. Reflection has become an important part of the new pedagogies and it proved extremely helpful as a learning tool. Assessment tasks that examine both linguistic and professional criteria, such as clarity, cultural appropriateness, and persuasiveness, provide clear landmarks for students' success. These assessment methods align with the goal of preparing students for the real workplace, where communication is evaluated not in isolation but as part of larger professional performance. By adopting different and authentic assessment strategies, teachers make sure that evaluation reflects the complexities of real-world business communication.

4.Challenges in teaching Business English today

These positive changes have come with their challenges. One important issue is the problem of proficiency levels within the classroom, or the so-called mixed-level class, which can make it difficult for the teacher to create activities that engage all learners. Educators must basically balance the needs of beginners, who require foundational support, with those of more advanced students, who need nuanced and more specialized instruction.

Another challenge is keeping pace with the rapidly changing business environment, in which new technologies, communication platforms, and industry trends emerge constantly. Teachers must be informed about these developments to ensure their curricula remain relevant. Additionally, limited institutional resources, such as access to technology or professional development opportunities, can slow or sometimes even block the adoption of innovative teaching methods. Dealing with these challenges implies an ongoing collaboration between educators, institutions and their management, so as to align educational practices with workplace demands – and this might prove to be quite challenging.

Looking ahead, teaching Business English will probably continue to evolve in response to global trends. The rise of remote work and virtual collaboration, accelerated by the COVID-19 pandemic, has highlighted the importance of digital communication skills. Students must be able to use online platforms, manage virtual teams, and maintain

professionalism in digital interactions. Sustainability and corporate social responsibility are also becoming more and more important in business discourse, showing the need for curricula that address these topics through relevant vocabulary and real-life contexts. Furthermore, advances in artificial intelligence and automation may reshape the skills required in business communication, showcasing the importance of creativity, adaptability, and human connection - qualities that machines cannot replicate. By anticipating these shifts, educators can prepare able students that will thrive in an increasingly complex and interconnected business world.

5. Conclusion

In conclusion, the teaching of Business English to in tertiary education is going through rapid transformations, driven by learner-centered teaching approaches, the widespread use of technology, intercultural competence, and the use of authentic materials. These trends reflect a broader recognition that effective business communication goes beyond language proficiency to include critical thinking, cultural awareness, and professional skills. Task-based learning, blended learning, and soft skills training enhance even more the students' ability to apply their knowledge in real-world contexts. While challenges such as diverse proficiency levels and rapid business changes are quite important, innovative teaching practices may offer pathways to address them. By embracing these modern trends, teachers can equip students with the tools to succeed in the globalized business environment, ensuring not only linguistic competence but also the confidence and adaptability needed for lifelong professional growth.
